

SUPPLEMENTARY MATERIAL

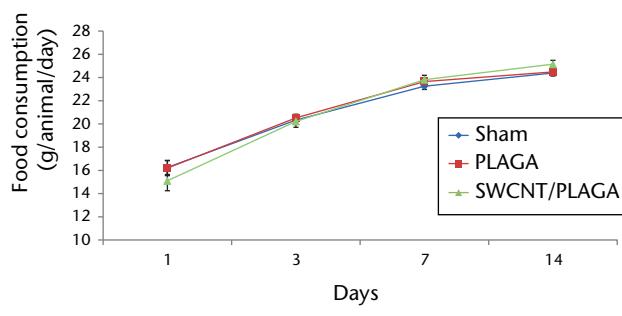

Fig. a

Graph showing the food consumption in rats implanted with Sham, poly(lactic-co-glycolic acid) (PLAGA) and single-walled carbon nanotubes (SWCNT)/PLAGA composites at two weeks post-implantation. Data represent mean with standard error of the mean and $p < 0.05$ was considered significant

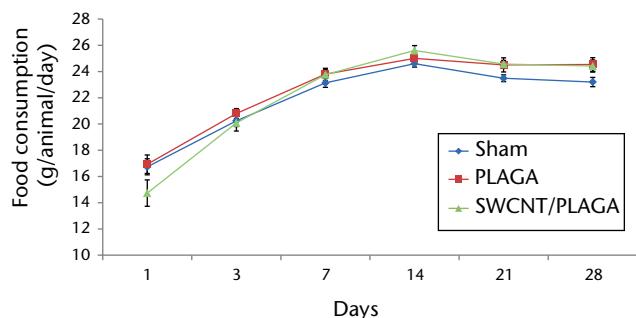

Fig. b

Graph showing the food consumption in rats implanted with Sham, poly(lactic-co-glycolic acid) (PLAGA) and single-walled carbon nanotubes (SWCNT)/PLAGA composites at four weeks post-implantation. Data represent mean with standard error of the mean and $p < 0.05$ was considered significant.

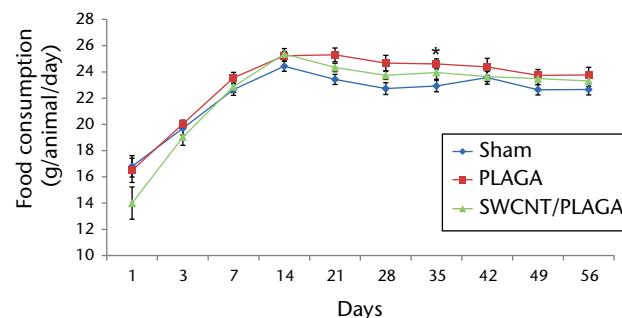

Fig. c

Graph showing the food consumption in rats implanted with Sham, poly(lactic-co-glycolic acid) (PLAGA) and single-walled carbon nanotubes (SWCNT)/PLAGA composites at eight weeks post-implantation. Data represent mean with standard error of the mean and $p < 0.05$ was considered significant. *PLAGA was significantly different from Sham.

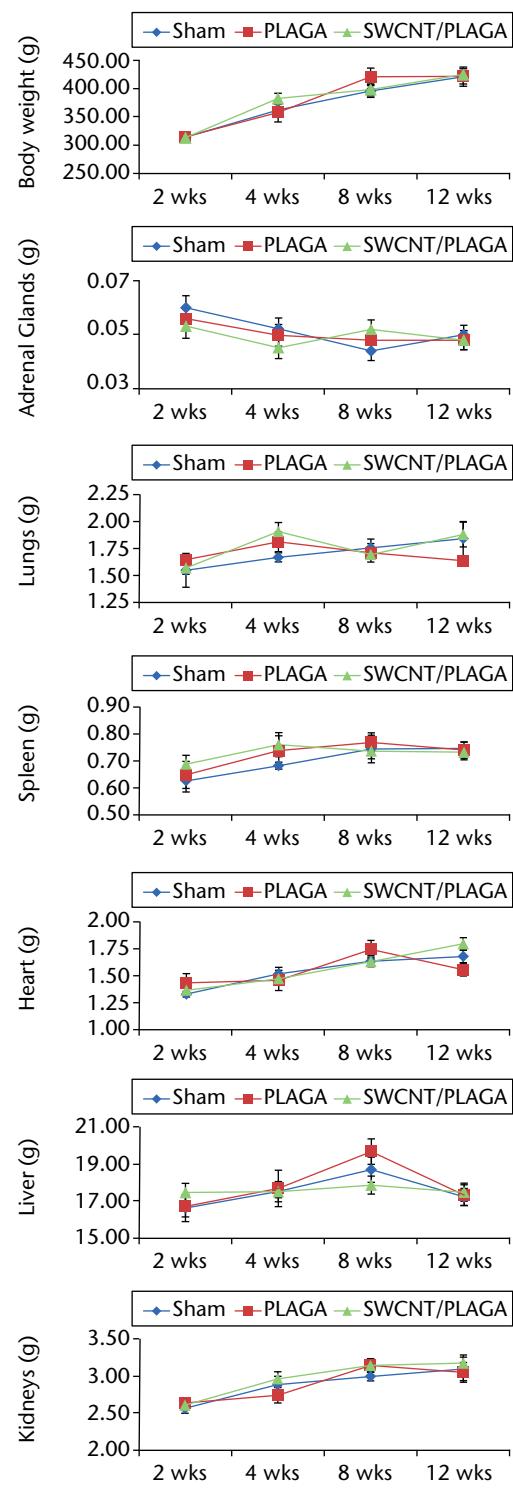

Fig. d

Graphs showing the absolute organ weight in rats implanted with Sham, poly(lactic-co-glycolic acid) (PLAGA) and single-walled carbon nanotubes (SWCNT)/PLAGA composites. The parameters include body weight, adrenal glands, lungs, spleen, heart, liver and kidneys. Data represents mean with standard error of the mean and $p < 0.05$ was considered significant.

Table I. Urinalysis values of rats implanted with Sham, poly(lactic-co-glycolic acid) (PLAGA) and single-walled carbon nanotubes (SWCNT)/PLAGA composites at 12 weeks post-implantation

Parameters	Group	Sham (5)*	PLAGA (5)*	SWCNT/PLAGA(5)*
